Property Description

Our LiveAlgarve Realty Team presents you with a 4-bedroom semi-detached villa set within a low-density residential quarter of Lagos. The property may suit you if you value spatial calm without detachment from urban life. The property sits at a modest elevation, offering views of the town from the upper floor. While not isolated, the area tends to remain quiet throughout the year, including peak seasons, a factor considered relevant in coastal housing theory when assessing long-term residential comfort.

The historic centre of Lagos is approximately 2 km away, which is a short drive or a manageable walk. Praia do Porto de Mós can be reached in around 10 minutes, while Meia Praia and other eastern beaches lie at roughly 4 km. Faro International Airport (FAO) is about 90 km away and can be reached in just under an hour. Several established golf resorts, including Boavista and Palmares, are within a 3- to 6-kilometre radius.

Architectural Organisation and Interior Space

With a built area of 192 m² distributed over two floors, the villa presents a layout that appears intentionally flexible. Two bedrooms are on the ground floor, which may support single level living if required, while the remaining two bedrooms are on the upper level. One of these is the main suite.

The kitchen and living area form a continuous open-plan space, renovated in 2023 with materials that focus on durability and ease of maintenance. The 3 bathrooms, also updated during the renovation, reflect a stylish contemporary approach. A separate laundry room, additional storage areas and a functional patio contribute to everyday usability.

Exterior Space and Environmental Qualities

The 390 m² plot allows outdoor autonomy, a heated swimming pool with ambient lighting forms the centre of the exterior layout, accompanied by a poolside terrace that supports use throughout the day.

Two separate terraces are oriented to capture both morning and evening light. The garden features mature plantings and fruit trees, offering seasonal variety. A built-in barbecue area and an enclosed garage complete the exterior programme.

Technical Upgrades and Comfort Systems

Although originally built in 1990, the villa underwent a comprehensive renovation in 2023. Air conditioning is installed throughout, complemented by an eco-friendly pellet stove. Solar water heating supports energy efficiency, while new windows and mosquito nets improve thermal and acoustic comfort.

Security considerations are addressed through a professional alarm system. Pool heating has been installed, extending the period of use beyond the summer months. These interventions suggest a renovation strategy focused on performance and long-term habitation.

Location within the Lagos housing landscape

Positioned close to beaches, local shops and the historic centre, the property occupies a middle ground between resort-driven development and traditional residential fabric.

Golf courses, coastal walking routes and essential services remain accessible without dominating the immediate surroundings. That supports permanent residence and extended seasonal use.

Concluding perspective

Properties of this scale and condition, particularly those offering renovated interiors alongside meaningful outdoor space, are limited in established areas of Lagos. While market conditions fluctuate, this villa could represent a considered option for buyers seeking a coastal home that prioritises liveability over spectacle.
